7 NOTE: This is a 'working draft' sequence. It currently
7 consists of 89 contigs. The true order of the pleces
7 is not known and their order in this sequence record is
8 arbitrary. Gaps between the contigs are represented as
8 runs of N, but the exact sizes of the gaps are unknown
8 This record will be updated with the finished sequence
8 as soon as it is available and the accession number will
8 be preserved.

The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. All CDS over 100 codons have been analysed. Gene prediction is based on positional base preference in codons especially where there is an increase in the observed/expected third position of + C GAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon.

IMPORTANT This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence over lapping sections once, or longer, because we arrange for a
                                                                                                                                                                                                                                     Eiglmeier, K., Honore, N., Woods, S.A., Caudron, B. and Cole, S.T. Use of an ordered cosmid library to deduce the genomic organization of Mycobacterium leprae.

                                     S.typhimurium AnsP. Lasparagine permease (L-asparagine transport protein) (497 aa), fasta scores; opt; 1508 2-score: 1696.8 E(): 0, 61.2% identity in 366 aa overlap. Equivalent to M.tuberculosis Rv2127, ansP (MYCZ561.26, M.tuberculosis permease Rv0346c, aroP2 (MYCZ1810.06c, 75.1% identity in 345 aa overlap). Also similar to Membrane protein, contains PS00218 Amino acid permeases signature. Pfam match to entry PF00324 aa_permeases aginature. Pfam match to entry PF00324 aa_permeases, amino acid permease. Annotated as ORF TR:049801, designated arop2 in M.leprae cosmid EMBL:000017
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /trānslation-"MaTLAESPEPKSGASRAGVLGEEBGYHKGLKPRQLQMIGIGGAI

Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C.

CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gt, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /product="hypothetical protein Rv2680"

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed(expected third position G + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gt, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon. If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tuberculosis sequencing and mapping teams, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge EBID 15A Unite de Genetique Moleculaire Bacterienne, Institut Pasteur, 28 rue du Docteur Roux, 75724 Paris Cedex 15, France E-mail: parkhill@sanger.ac.uk

                                                           Direct Submission

Submitted (28-APR-1999) Drosophila Genome Center, Lawrence Berkeley

Laboratory, MS 64-121, Berkeley, CA 94720, USA

Laboratory, MS 64-121, Berkeley, CA 94720, USA

On Aug 2, 1999 this sequence version replaced gi:5629944.

For further information about this sequence, including its location
and relationship to other sequences, please visit our sequence
archive Web site (http://www.fruitfly.org/sequence/) or send email
to bdgggefruitfly.berkeley.edu. All contigs in this submission meet
the following cutoffs: length >= 200 bases.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 94 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

Submitted (22-ARP-1999) Drosophila Genome Center, Lawrence Berkeley Laboratory, MS 64-121, Berkeley, CA 94720, USA

On Aug 2, 1999 this sequence version replaced 91:5629943.

For further information about this sequence, including its location and relationship to other sequence, including its location and relationship to other sequence, please visit our sequence archive Web site (http://www.fruitfly.org/sequence/) or send email to bdgp@fruitfly berkeley.edu. All contigs in this submission meet the following cutoffs: length >= 200 bases.

* NOTE: This is a "working draft' sequence record is consists of 30 contigs. The true order of the pieces a shotner and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

A computer readable medium has been developed which has recorded on it
A computer readable medium has been developed which has recorded on it
982 nucleotide sequences isolated from the Enterococcus faecalis genome.
X12938 to X13919 represent these nucleotide sequences which are primary
nucleotide sequences, also known as contigs. The computer-based system
can identify fragments of the Enterococcus faecalis genome with
commercial importance. The products can be used to detect the presence
of Enterococcus faecalis in samples. They can also be used for
diagnosing Enterococcal infection in an animal and monitoring
progression of disease, and for identifying agents which can be used to
modulate the growth or pathogenicity of Enterococcus faecalis, or
another related organism, in vivo or in vitro. In particular the
polypeptides encoded by the Enterococcus faecalis nucleotide sequences
can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                             Entercoccus faecalis; contig; detection; Entercoccus faecalis; contig; detection; Entercoccus faecalis; contig; detection; Entercoccus faecalis; contig; detection; Entercoccus faecalis; computer readable medium; ds.

Genetic engineering of membrane protein - by division of protein into cartridge genes corresp. to helix structure polypeptide(s) Disclosure: Fig 1: 17pp; Japanese.

A gene cassette is prepd. by division of the OR membrane protein encoding helix structure polypeptides. Restriction sites are indicated. A base sequence contg. such a sequence downstream to the tryptophan regulating gene derived from the E. coli tryptophan operon, the trpi, or the trpe polypeptide translation regulating base sequence, and the N-terminal Met of the trpi. (or trpE) or trpE polypeptide, respectively, is introduced in an expression vector for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bacterial antibiotic resitance gene, aacC2, probe.

We method for the detection and quantification of antibiotic callows detection and quantification of antibiotic resistant bacteria in patients, the environment and food primers - allows detection and quantification of antibiotic resistance genes which were used as probes in the restrict of the invention for the detection of bacterial species in a particular swild antibiotic resistance genes which were used as probes in the method of the invention comprises using probes and/or amplification primers which are specific, ubiquitous and sensitive for determining the presence and/or amount of nucleic acid comprises a selected target region hybridisable with the probes or primers. The method comprises contacting the sample with the probes or primers and detecting the presence and/or amount of the bacterial species. This method may be used to primers or amplification products as and indication of the presence and/or amount of the bacterial species. This method may be used to detect commonly encountered bacterial pathogens, e.g. Escherichia coli, Klebsiella pneumoniae, Pseudomonas aeruginosa, Proteus mirabilis, Streptococcus progenes, Haemophilus influenzae and Moraxalla catarrhalis. Streptococcus pyogenes, Haemophilus influenzae and Moraxalla catarrhalis. These bacterial species are associated with approx. 90% of urinary tract infections and with a high percentage of other severe infections. The analy and the membranes in the self-under severe infections. The analy and the percentage of other severe infections. The analy and other severe respiratory tract infections. The analy and the percentage and exterial resistance to beta-langer.

```
A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences given in T19001-T26837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using polyT) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Beach library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived.
                                                                                                          Disclosure; Fig 9; 66pp; English.

The gene product may be expressed by an E.coli host transformed with a plasmid encoding the phospholipase gene esp. under control of a Serratia regulatory sequence. The phospholipase product may be used to hydrolyse fatty acids from phospholipids and lipids. Sequence 1400 BP; 283 A; 420 C; 453 G; 244 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matsubara K, Okubo K;
WPI: 95-206931/27.
Identifying gene signatures in 3'-directed human cDNA library - e.g.
for diagnosis of abnormal cell function, by preparing cDNA that
reflects relative abundance of corresp. mRNA in specific human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              16-0CT-1996 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          intron
                                                                                                                                                                                                                                                                                                                           exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              07-0CT-1996 (first entry)
Mutated BRCAl genomic sequence from sample set MSKCC family 19921.
Cancer therapy, breast and ovarian cancer predisposing gene; immunogen; antibody production; germline alteration; probe; lesion neoplasia; human; gene therapy; protein replacement therapy; protein mimetic; BRCAl; ds.
Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3401. The genes were designated lipb (Q44280) and limD (Q44281) and they code for a lipse and a lipses modulator protein, respectively. Due to the extreme GC content of the DNA, the sequence was difficult to determine (hence the "others" in the sequence). The limD start codon is positioned 3 bp downstream of the lipD stop codon. Lipp and LimD were found to be homologous to Liph and LimA, respectively. In denaturation/renaturation experiments, LimA chaperone protein was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Prepn. of active lipase in high quantities - by subjecting to denaturation and restructuring in presence of chaperone molecule Example 10; Page 43; 78pp; Bng1ish.
Two genes were cloned and sequenced from Pseudomonas cepacia DSM
09-DEC-1993 (first entry)
Pseudomonas cepacia DSM 3401 lipD gene.
Lipase, LipD; lipase modulator; limD; chaperone molecule;
